For the Year of our Lord,

1673.

PRESENTING,

I. The Planetary Motions, Aspects and Ecclipses: Together with the usual Furniture of other Almanacks, as Terms, Tides, &c.

II. The Figure of the World, and Judgment thereon; touching Sickness and Sanity, Plenty and Penury, erc.

III. The Genitures of those Three great Ornaments of Learning, and honor of our English Nation, viz.

SMr: Fohn Selden,
The Lord F. Bacon,
Sir Kenelm Digby Kt.

Made publick for the advantage of Artists, and illustration of Astrology.

With a Catalogue of all the Monarchs which have reigned over Great Brittain, since the time of K. Edgar.

By JOHN GADBURY Φ'λομα Βημαλικό,,
Student in Physick and Astrologie.

Ais vera est, sed pauci artifices riperiuntur.

长金金金金金长子金金金金金金金金

To his most Ingenious, and singularly approved good Friend, Mr. Noah Starling of Reading, in the County of Berks.

SIR,

If you please but to call to mind, how that above twenty years since, (to say nothing of after favours and Civilities, which ought to hold any man, pretending Ingenuity, as sirmly oblidgeds as Hand, Seal, and witness,) you were so active and Studious a Friend, not only to Astrology, but to me an unworthy Propagator thereof, that you refused not to become a Partner with me in the procuring to be Printed, the first Pamphlet that I ever wrote on that Subject; you will not be surprized at the sinding of your Name at the beginning of these sew sheets of Paper, as a Patron to him, that you had formerly, in kindness, been a Partner withall.

Tou had the honor of being acquainted with the Study of the Stars before me, (and in faying so, you know, that I do neither Romance or Flatter.) but your more weighty Affairs have prevented (not your Affection and Inclination, &c. but,) your perseverance therein: which is indeed an unhappiness more to Astrologys then to your Self, It having missed such support from your nimble and Astive Genious (you having a Q. admirably fitted for an exquiry after celesical Truths,) which very sew are able to befriend her with.

From your more eminent occasions, be pleased to plunder (in this case it may be lawful) an hour for perusal of this contemptible Brat, that thus comes to kis your worthy Hands, and to tell you that there is not any of your Old Acquaintance that hath a greater value for you, then—Sir, your most affectionate Friend and Servant.

JOHN GADBURY.

TOTHE

READER

Be he either Friend, or Enemy, to Astrology, or to my Self an unworthy defendor thereof.

I hear, I have bin subject to the Censure of Jundry of the Sons of Learning: Who have, it seems, deem'd me too torwards being no Academian my self, to propound how Learning may be advanced. Let me be bold to Apologize, and premise together.—
That I would not be thought so presumptuous, or over-weening, as to pretend in any thing I am able to perform, to direct or Instruct the Learned; but on the contrary, do most willingly submit my self and Labours to their Politer Judgments and Censures.

Nor am 1 so fond or soolish to believe, that all the Learning in the world Rests in Astrology. I know, there are not less then Six Liberal Sciences besides it; and more than twice six Laudable Arts on them depending And yet I know too, that all knowledge

may be better'd by it.

And, if in that Epistle, I have attempted any thing that is but seemingly different from the common Road of the Schools, (I do not know that it is.) I have not done it by way of Assront to them: or to any of the truly Learned; my Business was only to Promote and Advance the Truth; which ought to be (if it be not,) the Princely Mark, at which all mens Studies should Aim.

I would not willingly be tryed by the Prejudice of any man, that being a Judge, that knows not how to be Just. But, I dark become Appellant to the Reason of any Learned and Ingenious person, (Friend, or Enemy, to the Art I Study to support.) whether I have bin guilty of any thing in that Epistle, or in any other of my Labours published, that may so much as but probably injure the Judgments or Reason of any in the lower form of the worlds Academy. Much less the higher.

To give my vote for the advance of Science, as 1 am a Lover of the Muses, is, I hope, No Treason against the Gown of Purple. And in that Epistle I have done no more. And, let me be believed (I pray you) when I say I honor Learning, though I have

not the good fortune to be honor'd by it.

I labour'd under the ill Influence of Luna ad Quadratum Jovis, & M. C. ad oppositum Lunz, when I was but young: and was pull'd from the Breasts of Minerva before I was eleven years old.

Nay, I had Saturn, in the Oriental Quarter of my Genesis. And give me leave to tell you, that my Education having been below

my Birth bath prov'd Astrology true.

I know this age is swel'd almost into a Dropsy with Notions of all kinds: yet, should be forry to think, the Humble Reasons which I offer'd on the behalf of Astrology, should meet with such entertainment as might Oblidge me, to conclude them Disrelished only by Surfeited Judgments, or, that the Genious of the Times should be so Rickety, as to Grow big at that which was intended for its good, but never to disturb it.

what though I am no Graduated Schollar? Nay, what if I understood less of Science then I do? A single vote (though mean) hath sometimes say'd the Truth. A blind man may have a veneration for the Light of the Sun. And the Oxe in the Fable, thought it

no dishonor to be assisted by a poor contemptible Mouse

How have all Sciences been abused in this latter Age? How have all Sciences been improved? It is pitty that Knowledge should do injury. And yet such is the Face of things, that it sometimes doth so. But the Fault is not in the Thing it self, but in the misapplying of it. Optima Corrupta Pessima. Ill Stomachs convert wholesome Food to Poyson.

And thus I have observed, that our English Law-books, have not only generated great Swarmes of Sollicitors, but by their means, many Strifes and Controversies also; to the great prejudice

So the READER.

Books of Physick are so common in our Mother Tongue, that I know many, who can scarce Read; and many more, thatcannot speak sence, mounted up thereby to the honor of Doctors, in that severe and Elaborate Study: whose Patients, even humane Nature commands me to pity: it being surely a much greater missortune to fall into the hands of such Doctors, then any disease (say the Plague it self) can be unto them.

Ispare to mention how Divinity, the Queen or Mistris of all Learning, hath fared [by sundry profane and Atheistical tracts, that bold intruders into that Sacred Profession have published. But these are ills, that may be somer Lamented than amended.

Astrology, among the rest, hath not escaped pollution. For we have a fort of Fellows, petty Chymicks in this Science, that not-withstanding their Ignorance and unstrues for such matters, will be dealing therein, (and in Print too) even to the extracting the very Blood and vital Spirits out of that excellent Learning. My business therefore for many years past, bath been, and at present it, and in that Epistle was to inform such Persons that are apt to be dealing with that abstrale Art, how to avoid abusing, either themselves or it. It is not in this Study, as in the Promises of the Gospel: the River of this Science is not Navigable to all Persons. Elephants may indeed swim here, but lesser Creatures, Men of smaller Intellects, must have a care of drowning. Tis not common or ordinary for Crows to attain unto the strength of Eagles. And although such as know the road need no instructor, a guide is necessary to the Ignorant.

And if I have not been a faithful Monitor to this sort of People, who are daily, not only running themselves into Errors, &c. But even rendring the Glory of the Stars Cloudy and Maculous; let the Learned be my Judges. I abhor to be Censured by such as

From the mutable and degenerous practices of some presended Astrologers, I know many Learned men have thought too cheaply of Astrology. But the fault is not in the wine if Persons be intoxicated, but in their Ebrious appetites. Let them take but the abuse of this Art from the good use thereof, and they will then see reason to put an Eminent value upon it.——And so far I humbly request to become a remembrancer at least, unto this lost of Learned Persons that they would distinguish between the true wine, and the

To the READER.

Pregs; and not reject a known speculative Truth, in case they find it joyn'd to an Error in practice. For it was purely to reform the abuses practised under pretence of Astrolopy, and to rescue this Noble Science from an Ignorant and protane hundling, that t wrote that Epistle, so much censured, and yet so little minded: and that I have so often in my works referred my self to the impartial and unerring votes of the Learned. And as in any thing past, so in every thing I shall for the suture, make publique, will most readily abide by the same. And I should be Glad some others, eatling themselves Astrologers, would not be ashamed to do the like.—

I am, (Gentlemen) yours, &c. (being still a real honorer of, and searcher after true Science.)

From my House, in Brick-Court by the Deans-Yard. Westmin.

JOHN GADBURY.

Of the Luminarian Eclipses this Year. 1673. &c.

of them of the Sun: The Moon passeth cleer from suffering any such desect, because those of the Sun are Central, as is well observed by the Learned Heicker, out of Keplers Epit: Astron: lib 6.

The first Eclipse of the Sun happens on Thursday, February the 6. day; about our 8. a clock at night, and therefore not to be seen of us, because both the Luminaries will be beneath our Horison. But unto such who inhabit the Longitude of 56. degrees Westward from us, it will be Total; it happening so near the North Node of the Moon; and will appear exceeding dark or black for the time, according to Appian, who neatly treateth of the colour of Eclipses.

The second Eclipse that this year happens of the Sun, will be Celebrated on Saturday, August the second, about our nine a clock in the Morning, but will be scarsely seen of us, by reason of the Moon's Latitude and Parallax. It is possible, some small part of it may be observed toward the end thereof, on the South-East side of the Sun; but it being so little, it will very hardly be discernable in our British Horison.

This later Ec'ipse, though invisible to us, may be seen in the Atlantique Ocean, and in the greatest part of Africa; as also by such as pass the Arabian and Indian Seas. But because that neither of these desects are likely to be much visible unto us, I spare all further discourse thereof.

As a Demonstration of the great persection Astronomy is arrived unto in this our Age, all ingenious Persons may be pleased, on the fifth of November this year, an hour or two before the Sun rises, to observe a famous Conjunction of Jupiter

of the Eclipses this Year.

and Mars, in the East, in four degrees, &c. of Scorpio, a little to the Southward of the shining Stars of the Ballance. This Conjunction will be Ecliptical, almost, the Planets Latitudes being the same; and Mars will go near to hide a great part of Jupiter from our sight.

I commend it to the endeavours of the Sober Astronomers and Navigators as being the Persons most fit to improve so noble

a Phænomenon...

And, because past Observations in Astronomy are as serviceable to the Industrious Artist, as any to come, I will here acquaint him,—That on November the seventeenth 1671. Being Friday about six in the Morning, (it being then a curious Starlight, and calme Air.) I observed the Moon in Conjunction with the Virgins Spike. It was a Conjunction so near. and withal so pleasant to behold, that, according to common vision, the Moon seemed to touch the said Star; or the Star rather, to hang upon the Upper Horn of the Moon. I could tell you also what Glorious effects it portends unto all those that have that part of Libra, either Culminating, Horoscopical, or the places of the Sun and Moon in their Geniures; and that there are some in the world, I exceedingly honor, that are eminently concerned therein. But, I do not covet to be esteemed Gnathonical, or can I glory in the Name of a Parasite. Both which (and perhaps worse) Epithetes I should be forced to undergo; although, I were certain, I wrote nothing but the truth. should I divulge them.

Besides, I am (for reasons hereaster given) at present out of a humor for general publique Prædictions; and cannot tell you whether ever I shall trouble my self again with that part of the sydereal Science; All my Study and pains being at present employed about my Body of Astrology, which I have so esten promised to the world; and begins now to appear in a shape somewhat suiteable to my mind and likeing: as I hope it also will, to the truly Ingenious and grateful Sons of Art, for whose sakes I principally give my Self the great trouble of its Compile.

ment.

Zanuary hath xxxj. dayes.

I'me come again, my Readers hands to kiss;
And once a twelve-moneth, Court I such a bliss.
The last year I appear'd to moustrous black,
(Thank my kind Printer!) in my Almanack;
Fair Ladies they were frighted! others took
Me, for the Fellow with the Cloven-foot.

Fibruary be haxxviji. days.

My matter was so Martyr'd, I scarce knew,

(When once I went my harmless Brat to view;).

Whether 'twere mine or not? and yet I thought,

My Printer had not with the Fairles borought,

To change my Child. for here and there I found

My Image silly'd, but ah! no where sound

July hath xxxj. dayse

The pretty School-boyes, that were wont to look
With pleasure, on my harmless-little-book
Donow with indignation throw me by;
Because they can no Saints-dayes there descry.

Be quiet Juvenilians: I ne're thought
To spoil your Play-dayes. 'twas my Printers fault.

September hath xxx. Days.

Then the wife Carper, he exults and tryes,
To trap me in a hundred several wayes:
All this is false! and this! and this! and all!
Oh! here s our true Astrologer! he'll baul.
Be silent Sirrah! You, I have no mind
To gratisie, — Your Scomma's are but Wind:

October hath xxxi. Days.

What should I do in such a Case? my mind
Unto a thousand several thoughts inclin'd.
To Execrate my Injurer, I deem'd just:
But Heavens Chancery whispering, said, I must
Forgive my Enemies. --- I was to blame:
The Man that spoil'd my Book, can't spoil my Fame.

TO THE PROPERTY OF THE PROPERT

November hath xxx. Days.

Yet prejudice unsought sor, claims a due
Reward from him, who thereby's injured:
He that commands forgiveness, sounds a wo
'Gainst those that give offence. -- Then, let him read'
Nought but the Books he Prints. [If all like mine,]
And Plague enough he'll meet in every Line.

December hath xxxi. Days.

Now, of the Learned Reader I defire,

(And, of the vulgar honest one require.)

That he would pass by, what he has found amiss,

And lay the blame even where the Error is.

I hope in this year, I amends have made;

I'm sure on't: if he pardon what I've said.

OBSERVATIONS

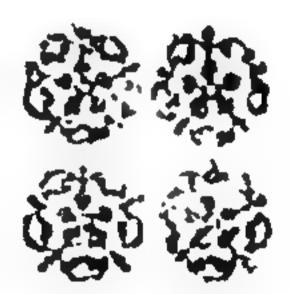

Astrological and Physical,

On the Year of our Lord, 1673.

With sundry Instances and Experiments of Cœlestial Insluences.

Humbly submitted to the Approbation and Censure of all Persons.

By JOHN GADBURY, Student in Physick and Altrology.

London: Printed by 7. C. for the Company of Stationers, 1673.

Observations on the Year of our Lord 1673.

Aving in my Almanack or Ephemeris, sor business to consult the significations and intentions of the Stars, in publick genéral accidents, as well to our own as other Nations, and thereby endeavoured the Instauration of Astrology. And, although my Predictions in all those years, fairly grounded upon the genuine Rules of Art, have been made happy with a suitable success; thereby clearly proving the Principles of Astrology to be firm and good, sufficient to satisfie any reasonable Opponent: Yet, being unwilling to inherit the name of a Latitudinarian, becaule in general Predictions the Astrologer hath a large Field to walk in; and unless he be the honester, may obtrude strange things upon the Reader, and yet seettingly colour them with an Aphorisme unduly interpreted] and finding Interest and Opinion to bear a great sway in the Regency of the World; and that my Judgments, when once in Print, (especially in relation to matters of publick tendency, and wherein the Noblest of Persons and things are concerned; viz. Goverument, Law, Religion, Sects, Consti-

Constitutions and Customs. Wars, Inundations, Earthquakes, &c.) are apt to be wrested, as the Sybils Gracles, to a sinister purpose: And that many will needs endeavour to extract that out of them, which was never by me intended to be so much as once in them. And also, that Parties, Interests or Nations, or Societies of Men, shall have no just reason, for the future, to restect any mord or passage upon themselves or concerns, that may, in luch a way, drop from my Pen.

I resolve (Isay) for time to come, to limit my self to such matter as shall prove inoffensive, and yet be found useful to iny serious Readers: whom yet I must desire not to think too cheaply of Astrology, for finding this alteration in iny method and manner of writing. It is not because I distrust the Rules of Astrology that I sorbear; sor I aver an absolute and unerring Verity in them, as they were lest us by the Antients: And by them fairly interpreted; I have (through Gods great blessing on my endeavours) been enabled to predict sundry admirable truths, many of which are yet fresh in the memory of the ingenious Lovers of Art; which not for oftentation or vain glory, (for I esteem nothing of thadows, or of an airy Fame; I could willingly impart with my right therein, to any that are covitous of it) but for satisfaction to the World of the excellent use that is to be made of Astrology, do I make the following Catalogue of some of them. Viz.

The Death of Oliver Cromwel, in my Almanack of 1658.

2 The Deposing of his Son, in that of 1659.

3 The Catastrophe and Death of the Illustrious Charles Gustave, King of Sweden, in Merlinus

Verax, from his Geniture.

4 The Restauration of the late most Excellent but suffering Prince, the King of Denmark; and the additional Honour he received by his Kingdom being made Hereditary, which before was but Elective: In Nuncius Astrologicus, from his Nativity; as also in my Collect. Geniturarum.

5 The Relief of Copenhagen, when closely besieged by the Swede; under the Name of Mons. Fr. Missonne, tor some particular rea-

ions.

6 The Death of Alexander Septimus, in that of 1665. and in my Collectio Geniturarum allo, from that great Prelates Nativity, fol. 75.

7 The Death of the late King of Spain, in my

Collect. Genitur arum.

8 The Retreat of the Turks, when they so hostily invaded Christendom, and made Germany to tremble, 1664. Vide Dies Novissimus, or Dooms-day not so near is dreaded.

9 The increase and abatement of the late great Plague, which swept away not less then an 100000 persons. Yes, and a greater Calamity then that. See my Discourse of the three CoYear of our Lord, 1673.

mets, and that Tract entituled, London's Deliverance predicted. Cum multis aliis, &c. as may be seen in my Annual Books, and other of my writings, not proper (I mult acknowledge) to be re-mentioned by my Pen.

And (heark thee good Reader) when I say I predicted these things, I do not lay any Title or Claim to Prophecie; I am not (I confess) spirituslized enough tor such matters: I live by meat and 'drink, and the rest of the sex non naturales, as do other Mortals. And an Astrologer hath no occasion, in his Predictions, to pry into God Almighty's Secrets, or to pretend himself a Privy Councellour of Heaven. He hath the Stars and Elements, both Calum and Solum, to contemplate and study for his allistance. And he that considers effects; as they lye imbodied in their proper Causes, and deduces his Predictions irom laudable Topiques; as he needs not the glorious Epithete of Cælestiel on the one hand, so he shall never deserve, on the other, to be esteemed a dealer with the Devil. [Albeit, I mult needs say, and I am troubled that I have occasion for it, that some in these days calling themselves Astrologers, have taken great pains to be thought Witches; or, at least, some what more then their Art will either own, or permit them to be.

And it pleaseth me, that I am able from my own experience to assert, that the farther any Artist shall wander from the Rules of Aftrology, the farther still he shall straggle from the Truth 5 and con-

lequently

mets,

Desine Manalios, jam desine, tibia

* M. Ogilbyes versus,

Virgil. Now * Pipes no more, play the Mænalian Strain.

Howbeit, although I thus resolve to leave off all Predictions de generalibus accidentibus Mundi, &c. I doubt not but to finde such matter, in consulting and examining the Starry Influences, for to surpish my Almanack withal for the surere, in relation to sickness and sanity barrenness and fertility, &c. and such other useful subjects (that may thence occur to me, for the use of the Country-Gentleman, Farmer and Husbandman, not totally forgetting the civil Citizen, the sober Student, and generous Merchant, &c.) as may be worthy the ingenious Readers pains of perusal. And so I humbly assume liberty to begin.

The signe ascending the Horoscope of this our Vernal Scheam, being fixed, declares the Figure it self significant to last for the whole year round.

In the Figures Preventional and Postventional to this our Mundane Figure, there are some things of a pleasant and duscid nature, others of cross and rugged import; which I shall tacitly minde in my discourse on this particular Theam of Heaven, as they occur to my use.

There

The Figure of the
WORLD;
or, @ in \(\gamma\).

1673.

March 9. 10 h. 12 m.

1. M.

Sub Latit. Londini.

D d & \(\psi\). ad vac.

There is no Reception effential (I mean by House or Exaltation) in the whole Scheam. What shall I say? Men will this year be very loath to conside or put faith in one another. O utinam! I wish I saw reason to say otherwise; there will be no true-heartedness among them: Tongues cross and contradict Hands: Many fair pretensions appear, where soul intentions are privately lurking. I the only friend in this year, is also our private Enemy, and by position and relation, our publick Foe in earness. Onhappy and unrowny people may some

And although M be a signe of Crast and Subtilty, and I in II not much behinde in such matters; yet it will now be more policy for men generally to adhere to the gravity of h, and to the honour and justice of O [do you not see that O and h behold the Lord of the year, and the Lunar Horoscope with amicable Rays?] then to attend the heats and passions, treacheries and projections, that I and I his Dispositor, do now both irritate and signifie.

A prudent observance of some sorts of things, annex'd unto a just and honourable acting of others, is the best caution for men generally to minde all this year: They will finde it more and greater prosit to practice taciturnity, then considence and garrulity. Tacere non nocet. But I come to considence

der

Of Sickness and Sanity.

One Planet is sole Lord both of the Ascendent, fifth and sixth Houses, and he posited in the eighth House; as if men should by Surfeits, Riots and Excess, &c. bring divers deplorable diseases upon themselves, many whereof will certainly (unless God otherwise check and over-rule the Energy of second causes) terminate in death. I am asraid his being there, in & to the Lunar Horoscope, viz. . from airy and sicry signes, together with the & her being posited in Y, so near the Cusp of the sixth, will occasion some raging distempers this year in the Head,

Year of our Lord, 1673.

Head, Miseraicks, Bowels and Secrets, too hard and knotty even for many learned Physitians, unacquainted with Astrology, to understand; much more difficult must they therefore prove to the vulgar Medick, or common Emperick. [Mistake me not, when I say such Diseases will prove too hard, &c. for the learned Physitian; I mean only, that they will prove too hard for his good fortune to discover, not for his learning to cure.] And here, by the way, give me leave, I pray you, a little, for Demonstrations sake, in this most useful matter or subject (mens lives being herein concerned) to digress.

The insides of men are as different as their outsides; and their minds, affections and humours, as
various as their faces, occasion'd from their divers
temperaments and constitutions; the exact and proper reason hereof, is no where to be found or read,
but in Astrology: And if Physitians know not the
right reason of these differences, let them be otherwise never so learned, it is impossible for them to
prescribe or administer convenient or apt Medicines
to their Patients, except by accident. And how
unbecoming such a way of prescribing is to a man
of ingenuity and parts, let the learned of the world
judge.

The person well skill'd in the Principles of Astrology, must therefore be concluded the sittest Physitian; none being so properly able to remove the
effect, as those that are acquainted with the cause.

Is any troubled with the Stone, the Gout, or any other

The property of the second of

other dangerous insirmity? Consult his Nativity if thou wouldst cure him; and examine by that, whether he be afflicted thus from the Beams of Saturn or Mars, or any other Planet, and suit thy Medicine for cure accordingly.

There is no disease so obstinate, but by apt applications in apt times, may be removed, else the study of Physick were vain. But if thou fightest blindfold, thou mayst as soon strike thy Friend, as buffet thine Enemy; thou mayst oppress Nature, instead of opposing the disease.

And thus have many persons, meerly through the want of Science in their Physitians, been made miserable, in the room of meeting a cure. Some, to my knowledge I speak it, of a slight Gonorrhea, have come to loose their Noses, when others labouring. under the same distemper, with ten times greater symptoms of danger, have escaped without darnage. Some again have been wrack'd and tortur'd with the Stone, Gout, &c. many moneths, nay years together, [when the Galenist with his Vegetative Physick, or yet the Chymist with his more generous Extracts from Minerals, have not been able (for want of knowledge in the Stars) to do themany good:] while others that have laboured under those crucifying diseases (by Astral means) have had ease in sem weeks, simetimes days.

The knowledge of Heavenly Influences, is the only Weapon-salve that can cure at a distance. There are balsamick Atoms emitted from the Stars, as well

Year of our Lord, 1673.

as corroding ones; but this, according to the times they issue thence, or Beams they are directed by. And oh! that the learned Physitians (who have the charge of mens lives in their hands) would not only not neglect the study of the Stars, but make use thereof.

It is not for nothing that the Great Hippocrates of old, and the Learned Galen, his Follower and Commentator, and the Polite Riverius, and Learned Sennertus, of late years, have reprehended perions professing Physick for ignorance in Starry Instance.

Should a Physitian administer but Saturnine Medicines to a Solar or Lunar Patient, and at a time Saturnine too; I aver it, that there will then be, plus peric. à Medico, quam à Morbo, &c. more danger from the Physitian, then disease; be will somer kill, then cure. And it is not without reason, but from an excellent Cælestial Warranty, that the Afrological Physitian considers the amities and enmities of the Planets. Quiequid ligat h, solvit 4; quiequid ligat &, solvit &, faith Hermès, Aph. 27. It you would cure the diseases of h, make use of the Medicines of 4; if of &, then apply medications of &.

Neither let any Enemy to the starry vertues telleme, that I hereby injoyn him a large task and trouble, &c. but let him rather consider the great business he attempts or undertakes, viz. the life of Man. Belides, I will assure him, that the tiou-

derstands Astrology; which I am sure many, nay most of the learned Colledge of Physitians do: which Honourable and Venerable Society, as I highly value, so I would not have the world believe, that I hereby intend to render mean or invalid; being assured, that if at any time those learned persons seem to disown, or not to make use of Astrology, it is rather their modesty, then want of acquaintance with, or respect unto the Art it self; and, as knowing the popular multitude, do commonly believe a little too blackly of it.

And therefore, as I would not have any learned Physitian nescious in so choice a Study, and so assisting to him in his practice, on the one hand; so I would not, on the other, have the vulgar Patient to be afraid of his Physitian for Astrologies sake; it being far better to go upon sure grounds in any

thing, then by guess.

Let now but the serious Enemy to Astrology (laying alide his passion, pride and prejudice) tell me, to what purpose we finde the Earth adorn'd with all those various Vegetables, of as different colours, tasts and scents? unless it be to cure the various maladies that the Stars afflict miserable mankinde constantly with: Nay, let him tell me how the Astral Beam, that causeth the distemper, can be reverberated, but by the Astral Vertue that is in the Plant or Mineral, of which the Medicine is made? And here a Question necessary seems to call for

Tear of our Lord, 1673.

an Answer; Whether Chymical or Galenical Physick be most suitable for the cure of Humane Distempers? I grant the Question too great to receive a full solution from my worthless pen: or, were it not, this place is too narrow for me to perform it in. Howbeit, in brief, my opinion is, that that Physick which is most homogeneal to the natures of men, is the most medicinal to them. Vegetables are the most agreeable to humane nature, because mankinde is nothing else but grass and plants carnified. And hence probably is it, that Divine Writ so Philosophically describes us, when it says, Namomnia caro est gramen, All sless is grass: Not but that I have a great honour for the Chymical Physitian, if he be but well experienced therein.

We know experimentally, that Rhubarb, an herb of Mars, is the best purger of Cholerick bumours; and Hellebore, an herb of Saturn, is the only herb in the world to remove Melancholy: So Borage, Asparagus, Agrimony, Cinkfoil, &c. being herbs of Jupiter, are tound admirable in cleansing the Blood, and quitting it from all distempers and ill ferments; he being Dominus Sanguinis. And thus Rue and Saffron, herbs of the Sun, are sound the greatest expellers of poyson, and comforters of the beart, &c. So Mints, Peneroyai, Aleboof, Mugmort, Vulvaria, &c. herbs of Venus, are the most pomerful in removing womens distempers. And so Elecampane, Fennel, Liquorice, &c. herbs cf Mercury, are found friends to the Lungs, Winde-pipe, and Speech

Speech, &c. and so of all the rest: Now this they do by Sympathy: They have their Offices and Effects to perform by Antipathy also, which I have not room here to speak of. I shall therefore conclude my Answer to the Question, and my Digression together, and come to the diseases of the year.

Hippocrates, Sect. 3. Aph. 19. tells us, with great reason, Normala 18 raviation, &c. That distempers of every kinde do afflici us at all times; but some peculiar diseases are most rise and existent in some particular seasons: And this is the work of the Astrologer to discover. Now, mixing the significations of the distempers of the year, the most prevalent will be found these following; viz. Vertigo, Lethargy, Frenzy, Catalepsie, Apoplexy, &c. Winde, Spleen, Hypocondriack, Melancholy, Plague in the Guts and Intestines, Obstructions in the lower parts of the Belly, &c. Imposibumes, Small-Pox, Tellow-Jaundies, Fistula's, Cholick, together with womens diseases, &c.

And I must tell you; that the Lord of the M.C. which signifies Physick is weak; and though he hap to be moderately well assisted by the * of ?, yet is he Lord of the eighth Angle. And therefore, to conclude this Theam, it is likely to prove an unbealthful year in the general, augmented unto by intemperance and rioting; &c. as before. So that I aim doubtful the weekly Bills of Mortality will be found to increase, chiefly about July, when & and ? come into St; and in August also, when & passes

Tear of our Lord, 1673.

ses over the Moons place, and the opposition of 4 Lord of (4). So likewise about the later part of September, and all October, when I makes a I with O, and passeth the Pof D and h, and he makes an 8 also. And this also seems exactly to correspond with another Aphorisme of Hippocrates, which saith, er oderonwew, &c. In Autumn most acute und deadly diseases happen to shew themselves, Sect. 3. Aph. 9. Aud lest some persons should wonder why I mention distempers of the Summer to appear in this season, I have, besides my Astrological reasons rendred, another Axiome of Hippocrates for my Authority, viz. Aph. 22. Sect. 3. vu de odivomaps, &c. Many sicknesses, wbich commonly happen in Summer, &c. do sometimes appear in Autumn.

Nor will November wholly pass away without manisest tokens of & his Ire, when he comes to the Ascendant of the Vernal Figure: Howbeit, I am in good hopes, that in December and January, &c. when 4 comes near the Ascendant of the year, that the sharpest and most malignant sicknesses will generally abate, and health posses their room. By this short Discourse, you may she's how necessary Astrology is to a Physician; and how the great Hippocrates his general Aphorisms cannot well be understood, or made particular use of by any, except they have acquaint ance with the Starry Insuences. Let them be for Signes and Seasons, &c. Gene Chap. 1.

Of Penury and Plenty.

I should now, in the next place, have proceeded largely to have taken notice of the Arguments of Penury and Plenty that the Figure of this year affords: But having designed the rest of my paper for some experiments in Art, which are indeed the only things that are wanting for the Advenment and Illustration of Astrology; I must beg my Readers pardon, if he finde me the shorter in my Observations thereon.

The New Moon preventional was celebrated in the later degrees of Pisces; and Jupiter, at the ingrels of Sol in Aries, was in opposition of her; and that (you'll say) is not very good. The Full Moon postventional, happened in twelve degrees of Libra, near the Conjunction of Jupiter, and Spica Virginis, (and that makes amends for the other.) And although she have an unluckie separation, yet she hath no despicable application in either Figure; only in the Vernal Scheam, (which is the chief of the three) she is void of course, and in a signe of sterility; and her Dispositor, who is likewise Lord of the Horoscope, is in a barren Signe also: Albeit, there is a fruitful Signe ascending; and Mercury, the Patron of Ingenuity and Activity, is in Trine unto it from another prolifique Signe.

Hence, in brief, I conclude, that as the year in general will not be exceeding fruitful, so it will not be very barren or improlitique: It will be moderate in cherishing and bringing forth it's increase;

Tear of our Lord, 1673.

and (from Mercury's Trigonal Beam) may admit of an improvement from the industry of the careful and painful Husbandman, whom (non obstante the Moon her being in opposition of Jupiter) I would advise to Plant, Plow and Sow, &c. in this year, in such times chiefly, that the Moon is in good aspect of the Sun, Jupiter, Venus, or Mercury; making use of prolifique or fruitful signes for their Horoscope, at the beginning of such their painful labours. For this is the way to add Fortune to Industry, and to help forward the powers and operations of the Stars, and to avoid many menaced prejudices: According to that of Ptolomy, Cent. Aphor. 8. Sapiens anima confert Cælesti operationi, ut optimus agricola arando, expurgandóque confert Natura.

That I have not given you my Authorities at large for these Presages, is only want of room; my paper being designed for other matter, which I hope will not be unwelcome to the ingenious peruser. But sor those that desire to see a more Antient and Authoritick reason of such matters, then what I have bere afforded them, let them read Haly, Bonatus, &c. in their Chapters upon this Subject, where they may be more amply and fully satisfied concerning the premises. And having first spoken a word or two to the generous Merchant, I shall hasten to my promised Experiments.

Of Merchants and Merchandizing, &c. this year.

It may not be forgotten, how that in my Almanack for the year 1671, I cautioned the genehim in that year, for reasons therein given; and that many more of their Ships were then known to be lost by ill meather, and by the Turks, &c. then in several years before, as I have heard divers of them acknowledge. I am forry I see cause to become their Monitor here again, as & in the ninth induceth me to be.

all Astrologers agree) it must needs be so to that part of Heaven in which it is found located. Tis now in the Angle, representing Merchandizing, and voyaging by Sea, &c. and the Moon, Ladv thereof, is in quadrate to it, and in opposition of Jupiter, a Planet that receives Exaltation therein; as if many eminent and excellently promising undertakings transmarine by the adventurous Merchant, and generous Marriner, &c. would be begun at desperate and unluckie times, and without sober consideration had unto the position of Heaven, under which they set sail: cavet Mercator, &c.

It behoves not only I bysitians (as I have before urged) but Merchants also, to understand a little portion of Astrology, or else they may come to part with their substance or treasure they know not how; and the Sea or Pyrates may devour that, which they had designed for their Daughters portions, &c. I speak it not to flatter; I have known a Merchant save his Pramium money by observing a Figure of Heaven: And there is no man so unhappily necessitated,

Year of our Lord, 1673.

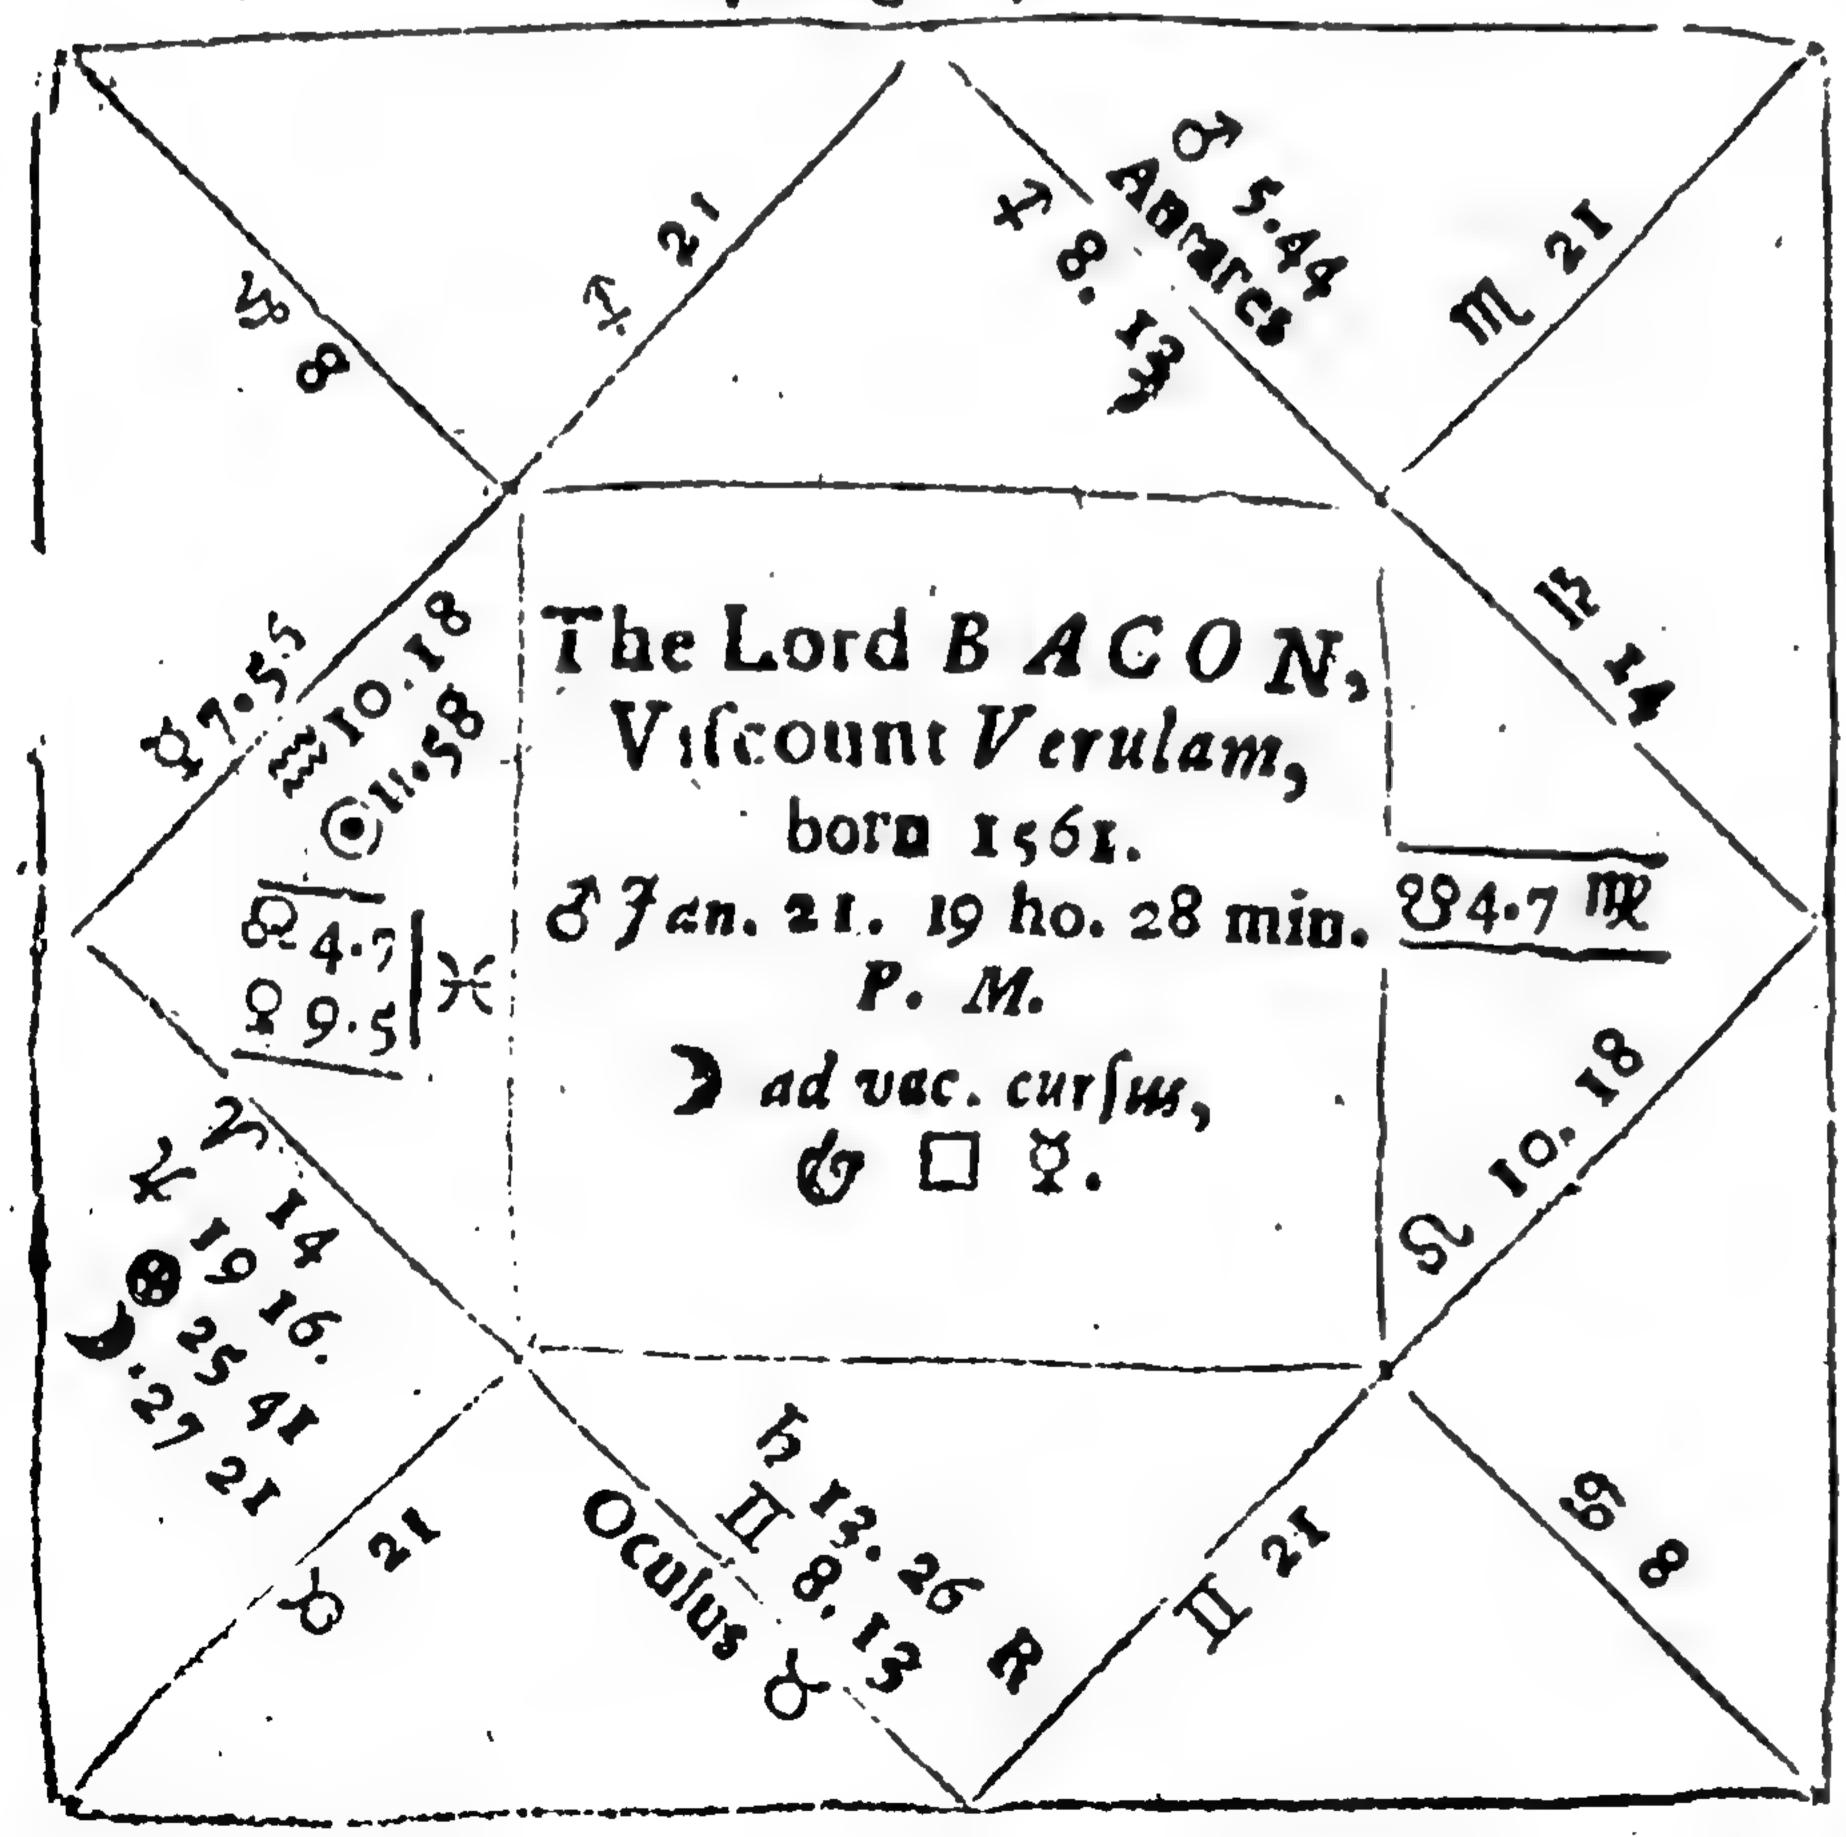

running into it. Nor is there any other natural way for a man to mils maligning his stars, or quarrelling at Providence, but by consulting Astrology.

We have a little hopes of good amongst the former arguments of danger, and that is from Mercury's being in Sextile of Venus, and both of them being in farourable aspect to the ninth House, together with the stars of Auriga descending thereon, of the nature of Mars and Mercury: which politions happily seem to animate and whet the ingenuity and industry of many of our English Neptunes and Merchants, to meditate the Heavens for their assistance in their weightiest undertakings; and not only so, but intimates them to be successful therein. In a word, I assure them, that it is not diabolical, but very lawful so to do: Nay, I. will promise trem, that they shall not finde it vain or faliacious, but both profitable and veritable. And this I hope (savente Deo.) cre long, to make most conspicuously appear to the world at large, by sundry eminent instances and examples: And let me not be believed for the future, if I endeavour to impose upon the world in these, or any other matters; sor I would be glad but to see one contradiction to any known and approved Rul of Astrology, that I might thence take occasion to renounce the study of the Stars for ever. For Ishall never accept of that for a Rule or Theorem, that is true in an bundred things, and erronious in one: Axioms ought to be infalible, (I mean so far only as God Almighty

Astrological Experiments. 1673. is pleas'd to permit us an acquaintance with Infallibility. Oc.) and so I esteem the Axioms of Astrology.

The Rule of Direction for Husbandmen betore given, is also proper and useful for Merchants, or persons trading or voyaging to Sea in this year; but it will admit of improvement, if the Nativity of the Voyager or Adventurer be consulted and considered therewith. The more Candles, the more Light. And, vis unita fortior.

Some Experiments of Astrology in the Genitures of the Lord Bacon, Mr. Selden, Sir Kenelm Digby, &c. 246 deg. 27 min.

Hese three honoured persons have been eminent Shining Stars in our Brittish Sphear, in the times they lived; and their memories are yet grateful to, not only our own, but other Nations. And although some of them happen'd to suffer strange Eclipses, and cloudy Fortunes, at some times of their lives, it was no more then what their Stars portended; as may be seen by their Nativities, which plainly prove the worth and truth of Astro-

If Antares, or the Scorpions heart, do well in the Mid-beaven, with the Sun and Mercury their Sextile thereunto; the Bulls eye, or Aldebaran with Saturn in the fourth House, in opposition of Mars in the tenth, skew'd an unfortunate Catastrophe or Conclusion: And so this bonour'd Native found it

by experience.

The Sun and Mercury in the Ascendant, declared not only the great Honour he arose unto, but the

length of life he attained.

And although Saturn with Aldebaran, &c. gave an ill Exit, in respect of worldly pomp and glory; yet the Sun and Mercury, being in Trine of Saturn, and the great reception that is between Saturn and Mercury, gave him a Fame post mortem; and that so bonourable and spreading, that it will never die. [Suffer me thus to Prophecy, or predict rather, for once.] And this is very aptly denoted to come by the issues of his own Immortal pen.

Astrological Experiments. 1673.

This Honour'd Native was a Friend, not on'y to all kinde of Learning in general, but unto Astrology in particular; as may be seen in all his excellent works, especially that entituled his Advance-

ment of Learning.

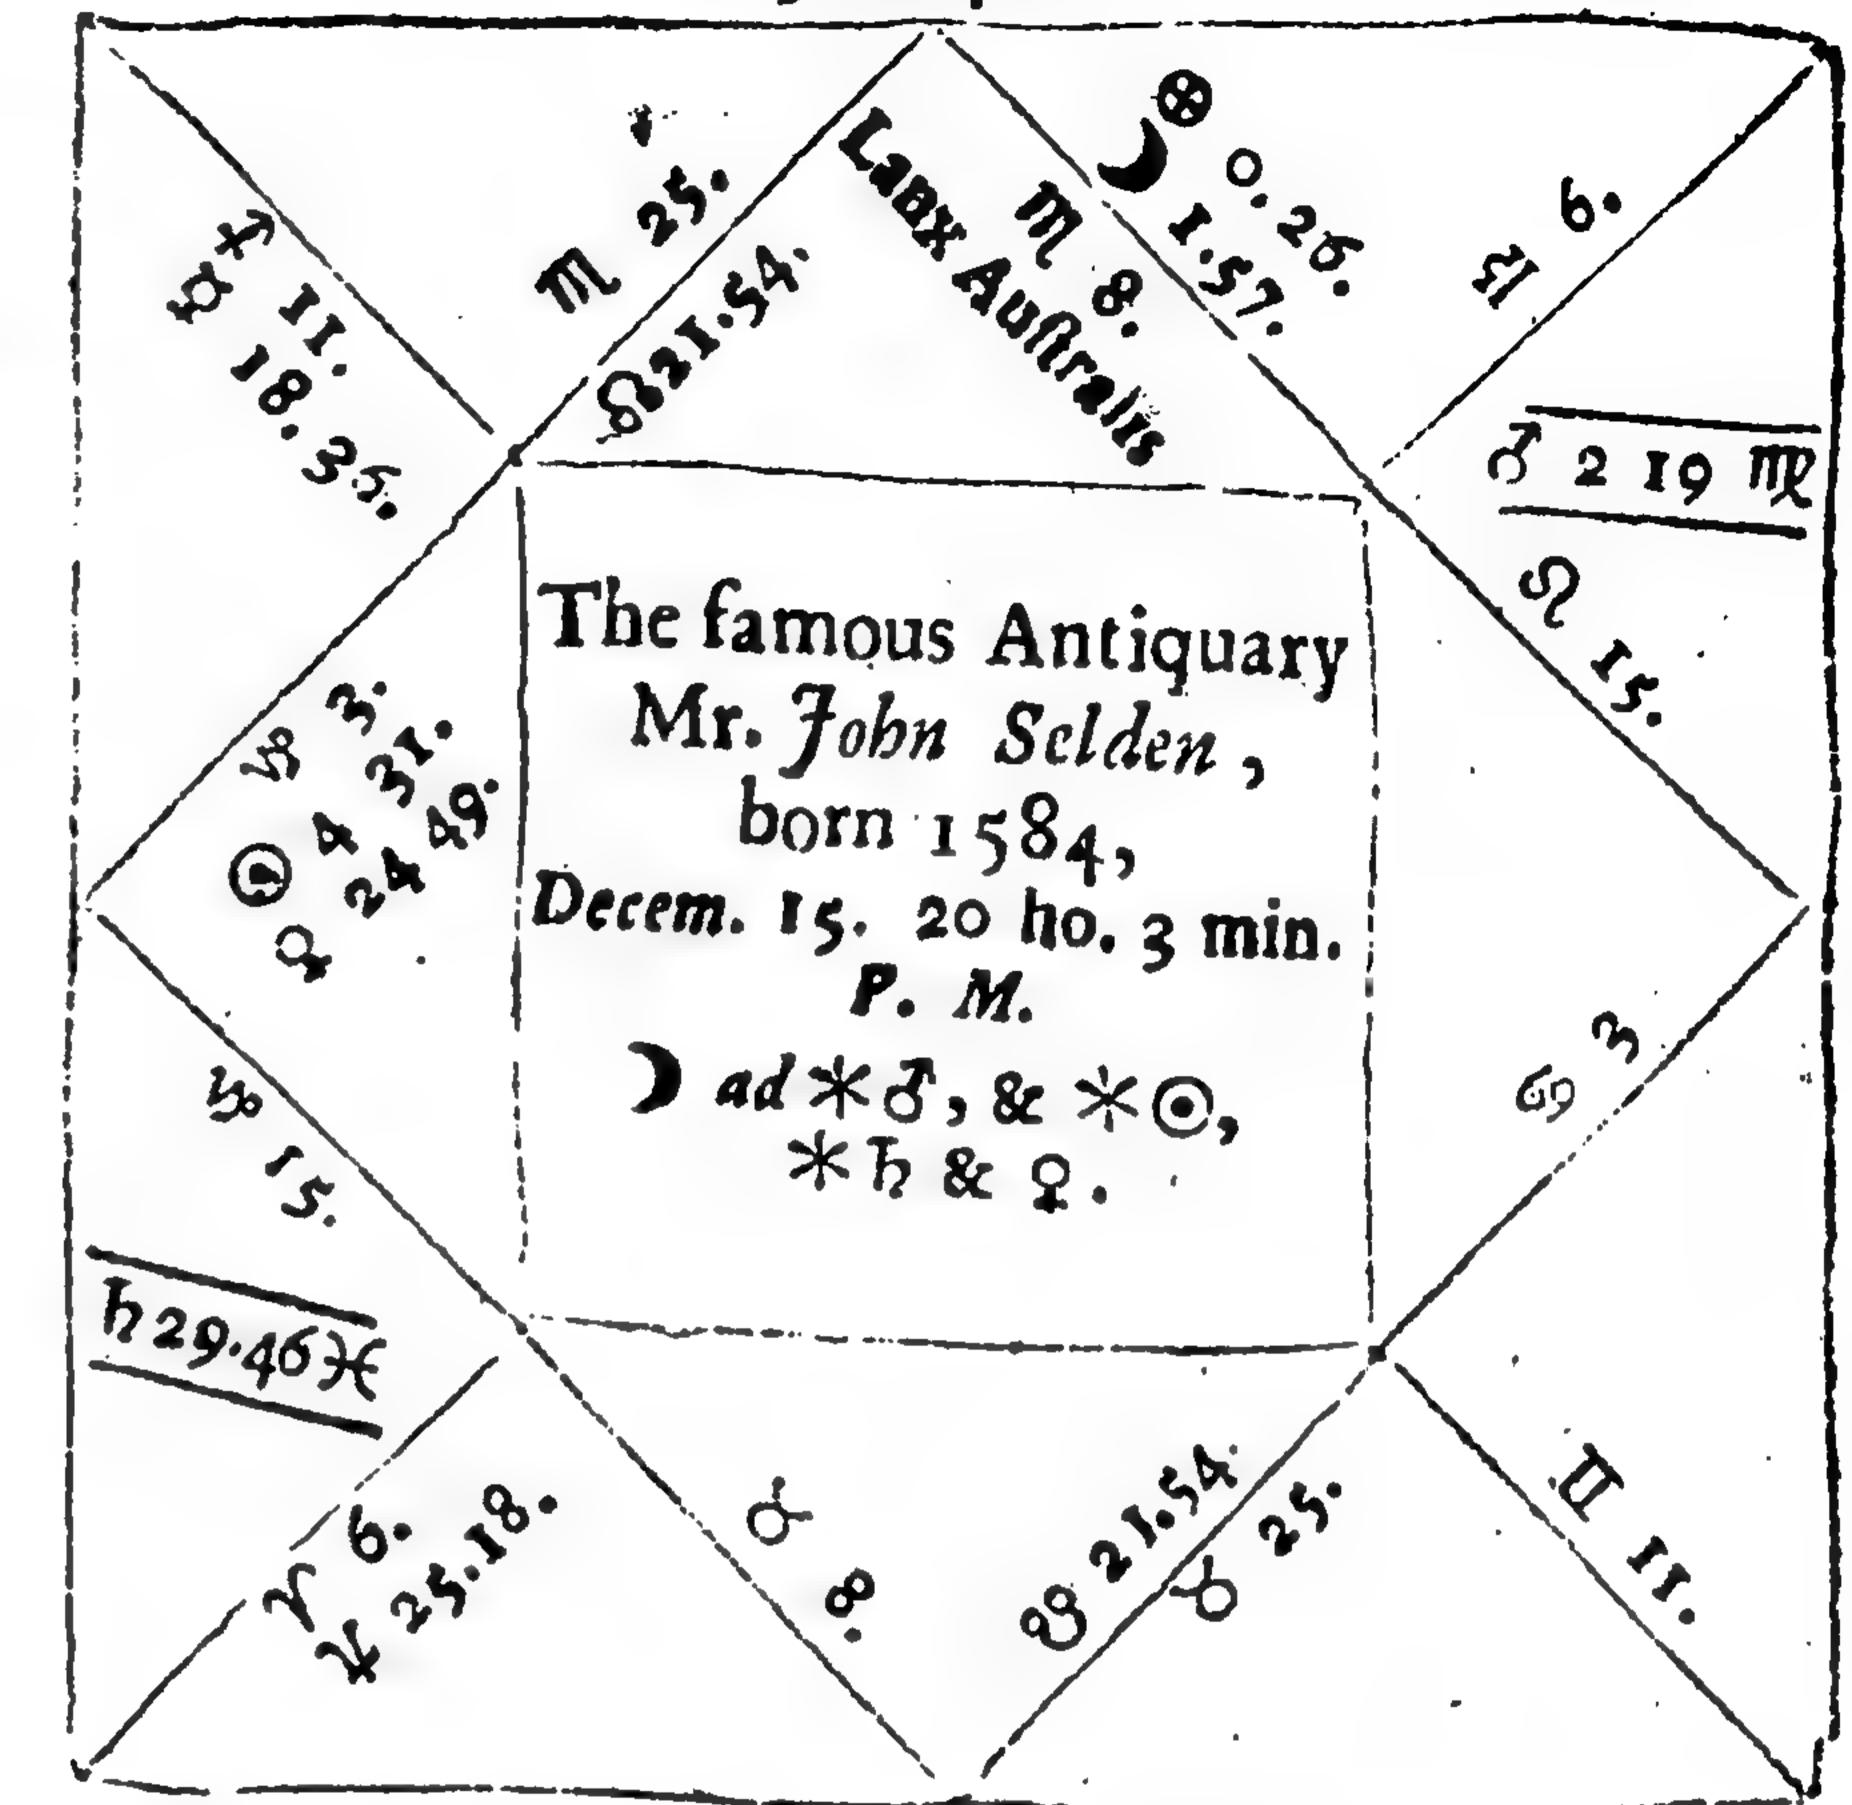

And certainly the knowledge of his own Nativity could not but add abundant content and comfort to him in his greatest cadency, even then when he was the most of all constrained to contemplate the incertainty of the world, and all humane affairs, in the Tower of London: Sith he could not but know, that Saturn in the fourth House, (under God) cspecially being in opposition of Mars, is the Astrological cause that all persons, or Natives (that have him so posited) do set cloudily, however they may have formerly risen or reigned. And of the trutb of this, I could give you fundry proofs and instances.

An Astrologer knows how to make use of this Geniture, although the owner thereof be (inter mortuos) long since dead. And I can tell you, examples of this nature may betriend an ingenious Artist, in twenty things and ten, that vulgar eyes can-

not discover.

The

Astrological Experiments. 215 ho. 41 min.

The Sun and Venus in the Ascendant, are eminent arguments of a long life. The Sextile of the Luminaries almost from Angles, denotes a spreading and popular same. The Trine of the Sun and Mars, and the Sextile of the Moon and Mars, declare Honour and Dignity, &c. all which this Eminent Native possessed and enjoyed in an eminent manner, during his life.

He was an excellent person both for Antiquity and Languages, as may be seen by his many ad-

mirable.

mirable Works extant. Hath he not Jupiter in Trine of Mercury, and the Moon in Sextile of Mars, in the Dignities of Mercury, viz. Virgo? But although he was a great Antiquary, and singularly well versed in all kinde of Learning, yet was he no good Astrologer, but unhappily gave his Vote against it; as may be seen in his Discourse entituled, Genedeurde; or, God made Man, Ge. And pray, who is he that ever was a good Aftrologer, that had Mercury in Sagittary in quadrate aspect of Saturn? Neither the Boasting Heminga, nor yet any of his deluded Followers, to confute Astrology, can give me one just instance.

But the Field of Learning is as large as that of Government; and many persons can manage a Battoon, a City-Sword, or Constables Staff, that are

not fit to wield a Scepter.

The Stars have a beauty and excellence in them, that a darkned Mercury cannot penetrate: And a man may be a good Antiquarian and Linguist, and yet not understand the Science of the Stars. And this I am sure can be no disparagement to the memory of this Learned Native, whole other parts being so polite and strenuous, makes amends tor his defects in this; and therefore commands my bonour of him.

If any shall object unto me, that Mr. Selden died very rich, and lett a vast Fortune behinde him, non obstante Saturnus in secunda Domo: I answer, he is Lord of the Second, and in reception of Venus, (a great significatrix of Health, us here plaAstrological Experiments. 1673.

ced) and in Sextile aspect of her also; which is a manisest and powerful Exception against the general

Rule that the Objection urgeth.

He hath the & Dragons Tail near the sisth House, and the Pleiades there; together with Venus in Capricorn, a sterile signe, in quadrate of Jupiter in Aries, a signe improlifique also. I would fain have any Enemy to Astrology but tell me, what children he lest behinde him to inherit his great riches? that I might thence learn to dishelieve the study of the Stars.

15'deg. 40 min 89 23. 43 8 The eminently learned Kt. Sit Kenelme Digby boin 1503. July 11. 5 ho. 4 min. A. M. Dàddad *4 AOh

It is none of my designe to write any Encomium upon the Noble Sir Kenelm Digby. His own Pen hath writhis own praise; and the Kingdom of Learning must ever be Debtors to his Merits and Memory.

The Ingenious Artist will soon observe in this Scheme, an & of the) and & from Cardinal Signes, with the 39 in the M.—C. which are arguments of Exile or Banifument; which unhappiness this Native did suffer in the late times of Usurpation: and I must tell you, that, had not the & of) and & been with reception, his prejudices of that kinde had been far more fatal to him:

Here is Q in St in * of Q in II; which notes a person of excellent Speech, great Reading, and an Enquirer into the secrets of Nature, &c. And, all this was eminent in this Learned Native.

Next, we may take notice of a noble \triangle between the \bigcirc and \bigcirc , which Astrologers say imparts Honours and Dignities, and a Command over others. This worthy Native was Chanceller to the Queen of that Glorious Martyr King CHARLES the First, and died possessed of that Honour. And, I must observe further, He had, not onely Command over the Astions and persons of many men whilst alive, &c. but, being dead, yet speaketh, and thereby commands their Beliefs and Opinions to do homage to him, in his Excellent Works.

I had the Honou to be known to this great Friend and Patron of Arts and Sciences; and can assure the world, that never any Lymner or Picture-maker did draw or paint the shape of any man more perfect and exact, then this Scheam of Heaven doth discover the person, inclinations, actions, and sufferings of this ever-honoured Knight.

He was a great Scrutator into the secrets of Astrology, and somewhat of his Experiments of that kinde, have I had the brown to see in the hands of that thrice-Honourable Lord, the present Earl of Bristol; which shewed him sufficiently acquainted with the study of the Stars.

If the Ascendant be Hylesh in this Geniture, the Sun must be Alchaeadin, or the giver of years. But because the Moon, his Dispositrix, is in opposition of Mars, he cannot give his mean years sully, which are sixty and nine; that unhappy Beam cutting off sive years compleat from that number. And sixty three years he did live, ending his life in Anno 1665, about the same time of the year in which he was born; his Death being ushered in with the ever-to-be-lamented (almost) depopulation of the most glorious City of the world, 100000 persons then dying of the Pestilence in that very year.

The Moon, but a little before his Death, was directed to the Quadrate of Saturn; it fell in the eighth House, viz. Dom. Mortis, and he Lord thereof. Such excellent persons cannot go to the shades like common people; but (as our Antipodian Kings) must have multitudes to bear them company.

In the Geniture of my Lord Bacon, the Sun was Hylech and Alchocoden both; but being in detriment, could not give his mean years fully; yet being Augula, brought this Honour'd Native within three years of it.

The Sun and Ascendant ad opposition Martis, cum & sine Latitudine, brought imprisonment, and a Catastrophilis Honour and Office, &c. the same significators ad conjuntitionem Saturni, & quadratum Veneris, brought Death.

In the Nativity of Mr. Selden, the Sun was Hylech and Alchocoden too, as in my Lord Bigois, and there did give his mean years fully; because radically in Sextile of the Moon, and Trine of Mars: The Sun and Ascendant both, being then directed ad oppositum Lune, cum of sine Latitudine, and near the Cusp of the foorth House. And thus much for those three Honour d persons Genitures.

Would the curious Reader know a reason why these Genitures happen to be published by me, beyond what I have given him already, which was for the bonour and advance of the truth of Astrology, and advantage of grateful Artists? For if that had been al, another (had he been furnished with them) might have exposed them to publick view, as well as my self; nay, probably have done it much better, the Scheams as well as the persons, being excellently morthy.

But certainly there is a more then common sympathy that at-

tends

Astrological Experiments. 1673.

tends the actions of mankinde, as well as their persons; and accordingly, have I been long inclined to a performance of this service.

Sir Kenelm Digby had Jupiter in Scorpio, the Horoscope of my own Nativity, and Mercury on my Medium Cæli.

The Lord Bacon had Venus in his Geniture, on the place of the Moon in mine; and his Moon and Jupiter were in Trine

to my Medium cœli, and place of Jupiter also.

Mr. Selden had my Horoscope culminating in his Radix, and his Mercury was on my Jupiters place, and his Venus was in loco Solis, Mercurii, Veneris, with me, and also in Trino Martis: His Jupiter was in Trine to mine, and to my Medium cœli likewise. And thus you see the reason of ay making these Genitures publick; and how that Sympathy hath prevailed with me.

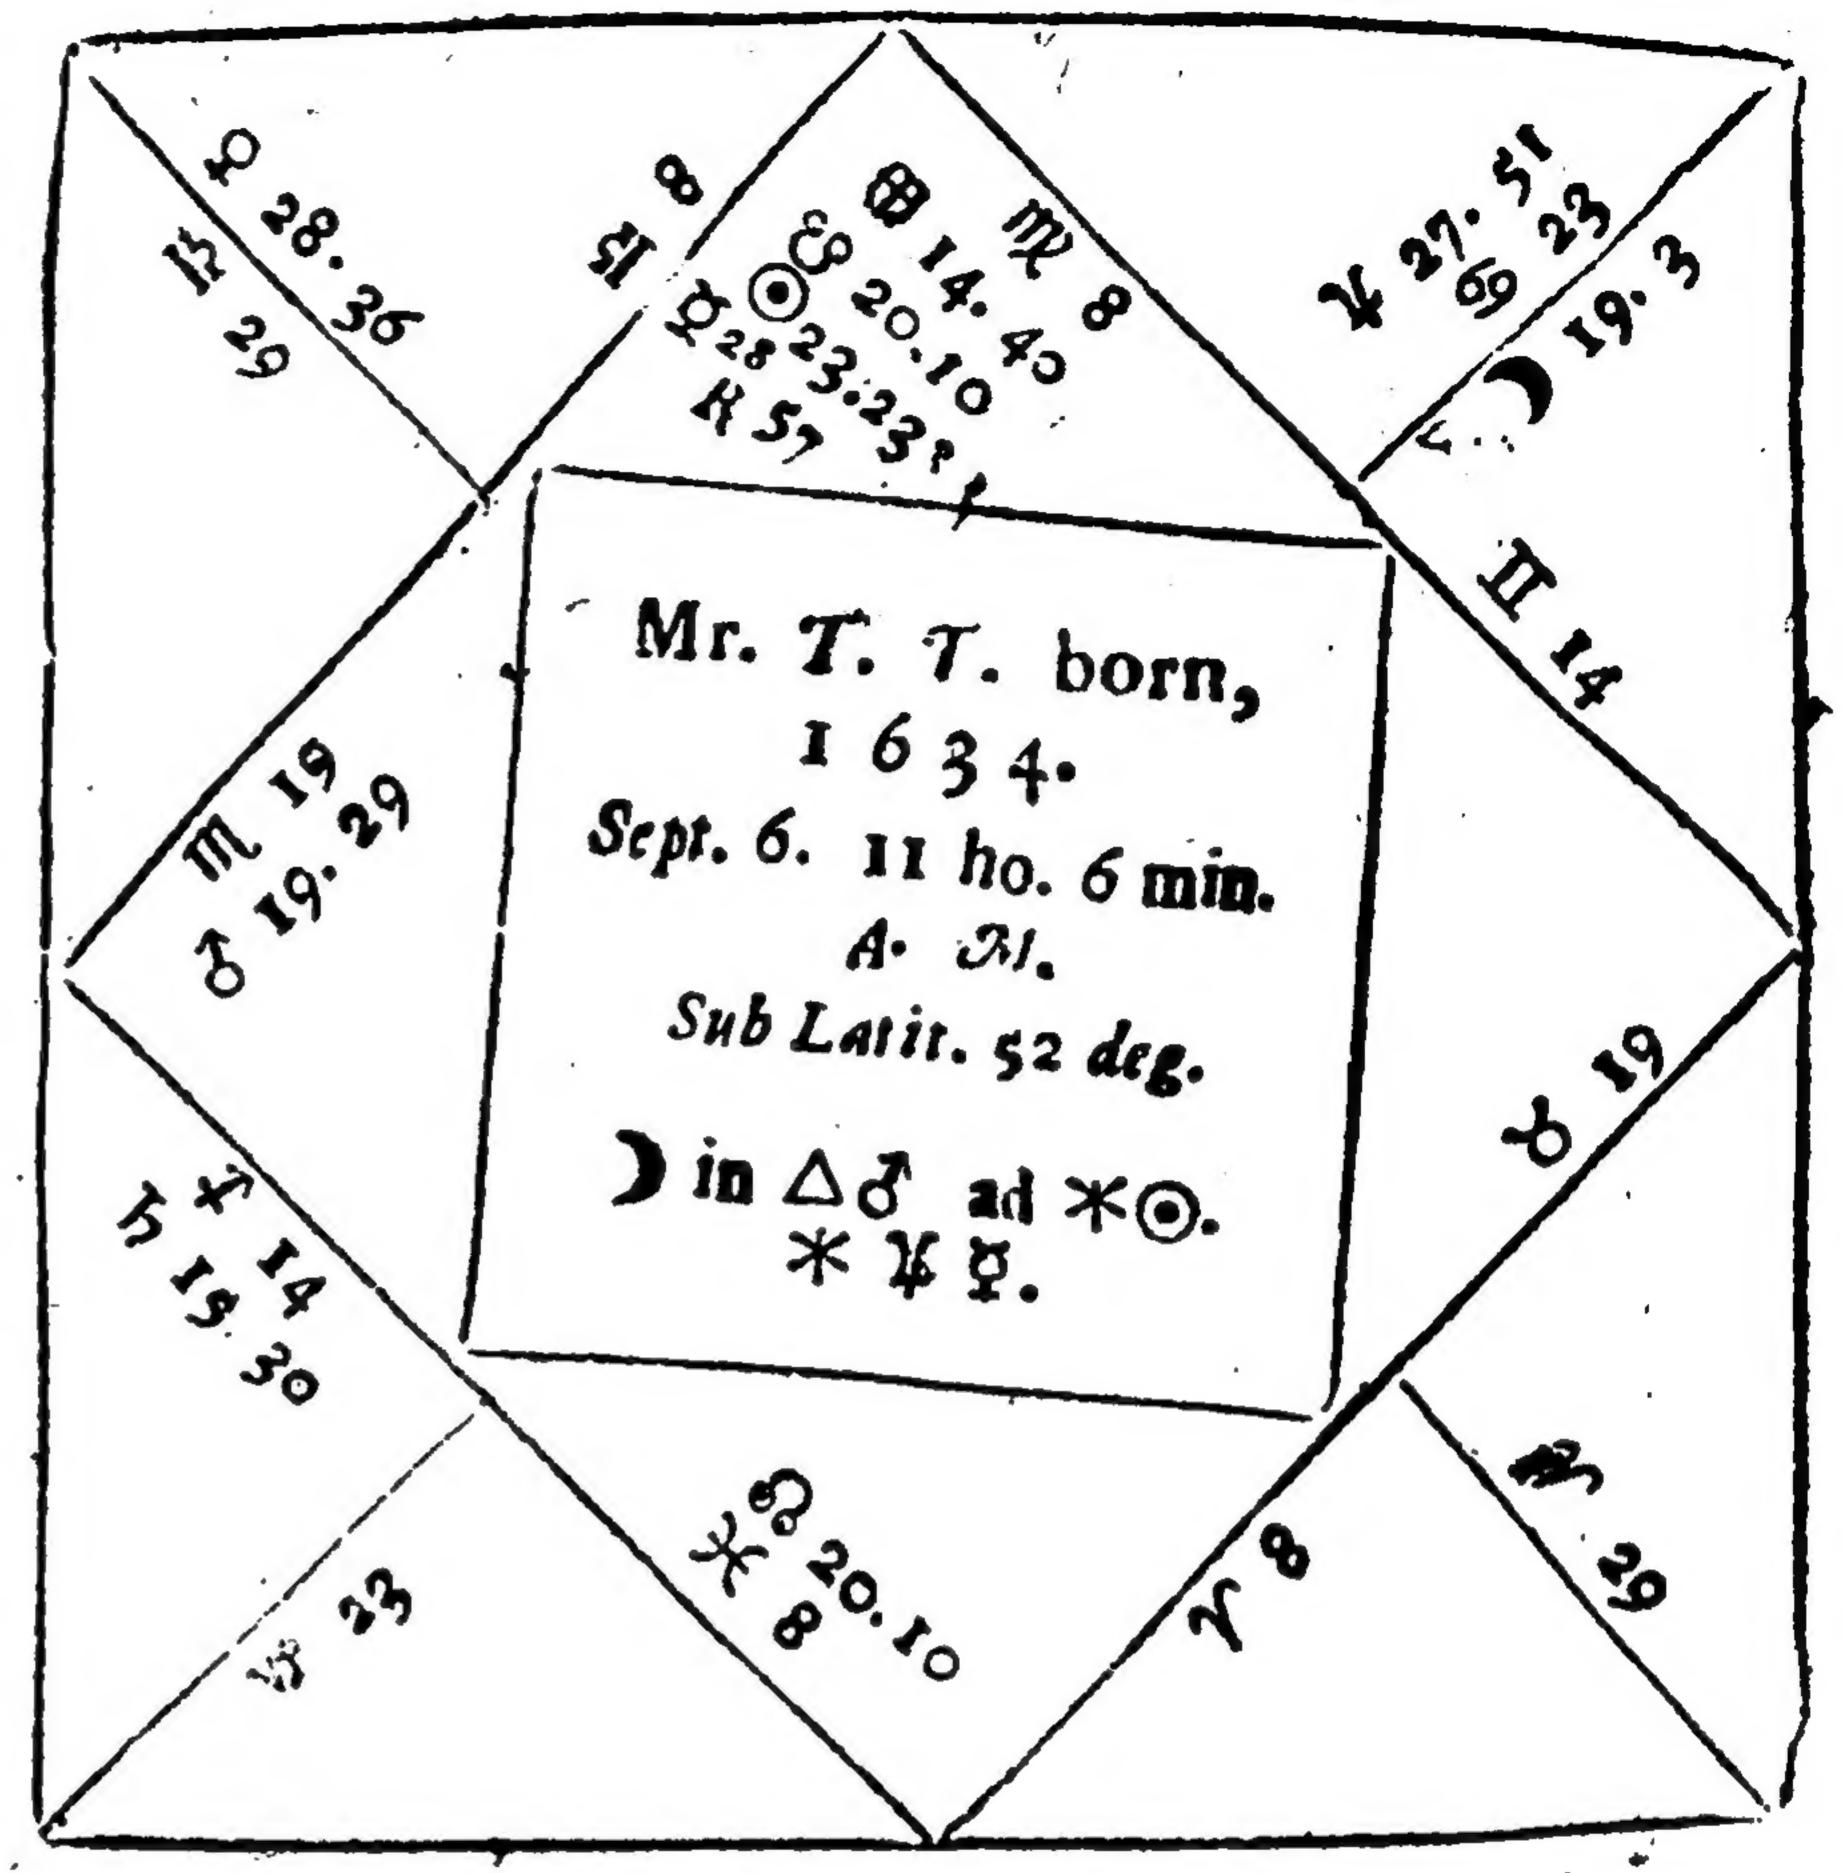

In this performance I have also made a great Mystery in Astrology publick; and, if rightly understood, have in this little (perhaps) said as much as either Trapez untius or Morine, toward an Explanation of the 33 Aphorisme of Ptolemies Centiloquium; which is this, "H pidia & to wors dau-Cavereu, &c. (i. e.) From the agreement or disagreement of the Luminaries, and the signes Horoscopical at the time of Birth, is truly discovered the love or hatred that shall be be mixt persons.

Tis to Astrologers that I have written this; and I should e-

steem it an bappines, were all my Readers such.

One experiment more, and (for this year) I have done: And in earnest, it is no despicable, but a remarkable one; and yet I have, for proof of the truth of Starry influences, above five bundred as eminent ones by me; many of which, I hope, in time, to meet an opportunity to produce, for the satisfaction of the Enquirers into Cæletial Science.

Astrological Experiments. 1673.

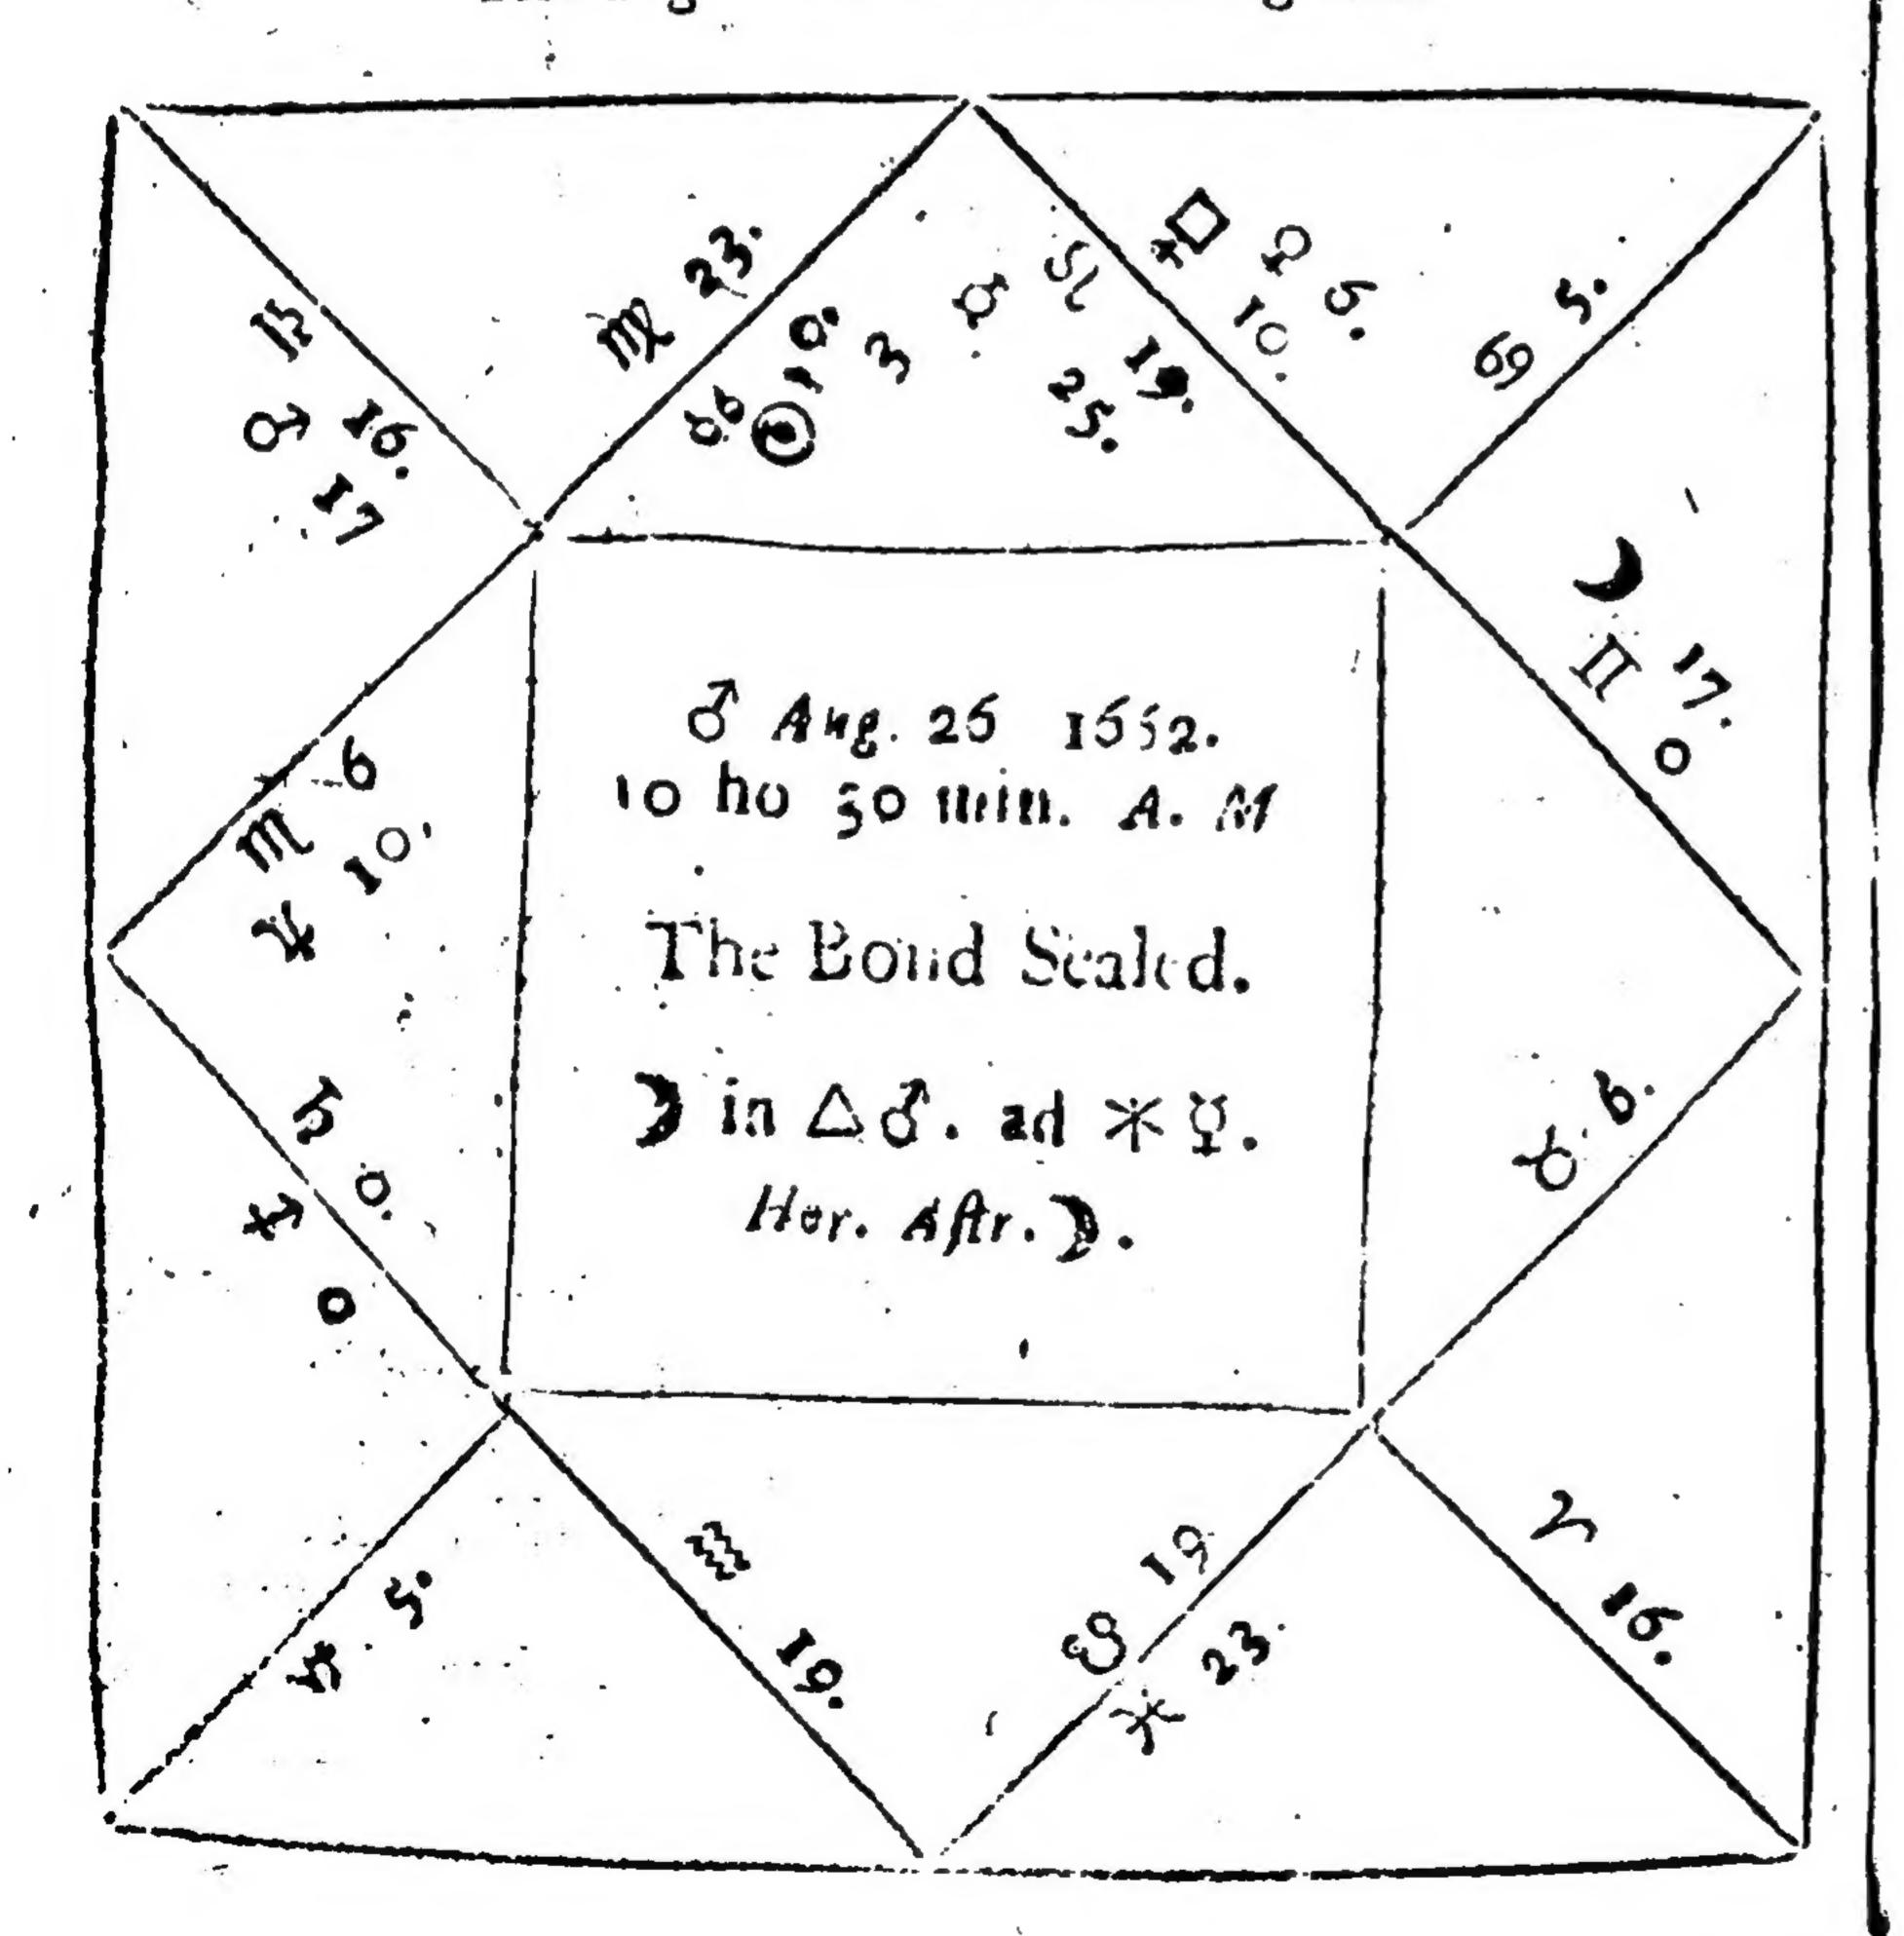

The person whose Nativity this is, Anno 1662, came to me (he being then in a low and desponding condition; he was a Feltmaker by Trade, and then a Journeyman to that Profession) and acquainting me with the time of his Birth, defired my 0pinion thereon, and directions therefrom, in some of his affairs, which at that time were not very great or confiderable.

When I had considered his Nativity, and sound it to be such an one as above expressed, I began to encourage him, and (sub Deo) to assure him, that things would succeed well unto him in a few years, and that better then he at present could expect; and bid him be consident, that the world would every way mend well with him, if that was his Nativity which he had brought me.

Astrological Experiments. 1673.

He could not, nor did Le much credit me at that time. Perceiving his dissidence in my words, to be the same with the despandency he brought with him, I enquired again of him, it the time of his Birth lie had given me was true? His answers, with circumstances observed therefrom, as person, hape, speech,&c. consirmed it to be the veritable time of his Birth.

And, (considering the strength of the Figure, it having not less then sive Planets essentially dignissied, a thing that happens in very fem Genitures) I askt him merrily what he would give me for 2s.6d. when he was worth 1000 l. He readily agreed to give me Bond for 20 l. when it should so be; which Bond he signed and sealed, Aug. 26. 1662. 10 ho. 30 min. A:M.
The Figure of Heaven being thus.

Astrological Experiments. 1673.

Now, I know, you long to hear the issue of this matter; and it was thus. It pleased God so to bless this Native, in 8 years time, from Aug. 26. 1662, that he thought it convenient to take up his Bond: which he did, on Sept. 1. 1670, with some unthankful erumbling, although I abated him to l. which I have been told by persons skill'd in Law, that even Equity would have given. But I desire not to be troublesom in trivial matters.

The man is now living in Spittle-fields, London, where he is set up a Dollor, practifing Physick; and hath, (to the honour of his Stars let it be remembred) built iwelve very handsom houses there, (known by his ownName) inhabiting one of them himself.

Tres aut quatuor Planetæ in suis dignitatibus, dant divitias magnas, was the Aphorism that encouraged me to part with my Half-Crown: and, I have another and another to part with, upon the same or like consideration. I am not angry the man hath prospered; but rather pleas'd, that by his Nativity I have proved Astrologie true. Eut the next Bond of this nature that I take of any, I will not, in the Election, place h upon the second house.

I offered him a crown for another Bond, (when he should be worth 2000 l.) bearing penalty as the furmer. But he refused.

Let no modest or religious keader mistake me; I do not produce these Experiments to evince a satul necessity, (or to prove Astrologers infallible; for I must acknowledge often to have erred:) I agree, with the great Aquinas, that the Stars onely incline, and not compel. And, if in this last Example, the man from such an obscure teginning, had arrived but to the happiness of 100 l. clear, it had been a good interpretation of his Stars toward him, quoad. (But then I had lest my Half-Crown.) The lesser wheels of a clock, or watch, have their effices to perform, as well as the greater wheels; and, all operate together for the perfection of the motion to which they were originally designed.

So Industry and Ingenuity have their Influences and Significations, as well as the stars. And, I do not define to let light by, much less desiroy, tesser causes, because I knew there are greater. The God of the Stars is a God of Order, and hath wisely proportion d every thing, both in the Greater and Lesser morld, that they might be the more serviceable to the general end, viz. his en glory. For, The heavens declare the glory of Ged. Pfal. 19.1.

ADVERTISEMENTS, &c.

by the Company of Stationers. And there is an E-phemerides of Fifty years, commencing where mine conclude, viz. 1682. almost ready for the Press; calculated by two ingenious Sons of Art, who are unwilling to have their Names known, until their own works publish them. It will be an eminent Service performed for Astronomers, Astrologers, Navigators, Physicians, &c. and a particular Honour to the English Nation; as proving it to be Mercurial, as well as Martial.

A Philosophical Essay, touching the Doctrine of Petrification in the greater world; whence is discovered the Origine of all Bodies to proceed from water and Seeds: being a Prodromus to a Medicinal Tract concerning the Causes and Cure of the Stone in the Kidneys and Bladders of men. By Dr. Tho. Sherley, Physician in Ordinary to His Majestie. Printed for William Cademan, at the Popes-head in the Lower walk of the New Exchange London.

The Fiery Trigon revived, by the Five Oppositions of the two Superiour Planets, Saturn and Jupiter, in the years 1672, 1673. With an Astrological Discourse of their eminent Significations, as well to the Dutch, as other Nations. Printed for Josiah Robinson, at Lincolns-Inne-gate, next Chancery-lane.

Merchants, Mariners, and all others that Trade or Voyage to Sea; offiting them in the prosperous beginning of Sea-voyages, Launching of Snips, Weighing Anchor, &c. Together with like Instructions, how (by Gods blessing) to avoid all Shipwrecks, and other disalers, usually happening in the Ocean. By the Author of this Book. Printed for, and sold by J. Robinson, at Lincolns-Inne-gate, next Chancery lane.

The Jamaica-Almanack, with a Calculation of the Nativity of that Noble Island for 180 years, &c. Printed for the Company of Stationers.
